Fall 2025

1. Account Creation

- As a User, I want to create an account so that I can access and use the system.

- **Pre-Conditions**

- The user must have installed all dependencies.
- The user launches the server.js file in the project folder.

- **Steps Taken**

- a. The user types in Localhost 3000 in their browser.
- b. The user is at the login page.
- c. The user clicks the “Create Account” link.
- d. The user fills out all fields and chooses a role.
- e. The user clicks the “Create Account” button.

- **Post-Conditions**

- The user must have created an account, with a password and unique username.
- The user is able to log into the system without issue.

- **Success Scenario**

- The user met all pre-conditions.
- The user successfully completed all the steps taken, listed above.
- The user can now log into the system with their own username and password.

2. Login and Authentication

- As a User, I want to log in, so that I can generate or edit summaries, or monitor the Audit Log.

- **Pre-Conditions**

- The user must have installed all dependencies.

- The user launches the server.js file in the project folder.
- The user has a valid username and password.

- **Steps Taken**

- a. The user types in Localhost:3000 into their browser.
- b. The user is at the Login page.
- c. The user enters their username in the username field.
- d. The user enters their password in the password field.
- e. The user clicks on the “Login” button.

- **Post-Conditions**

- The user must be at the homepage.

- **Success Scenario**

- The user met all pre-conditions.
- The user has successfully completed all the steps taken, listed above.
- The user is at the homepage after successfully logging in.

3. Uploading Doctor Notes

- As a User, I want to upload notes, so that I can generate summaries from the notes.

- **Pre-Conditions**

- The user must have installed all dependencies and accessed the system via Localhost 3000.
- The user must have created an account prior, containing a valid username and password.
- The user must be logged in.
- The user must be at the homepage.

- **Steps Taken**

- a. The user clicks on the “Generate Summary” Button.
- b. The system redirects the user to the summary generator page.
- c. The user uploads a PDF/DOC file into the page, or pasted text into the input textbox.

- **Post-Conditions**

- The user can see text in the text box.

- **Success Scenario**

- The user met all pre-conditions.
- The user successfully completed all the steps taken, listed above.
- The user is able to generate a summary.

4. Summarizer Pipeline

- As a User, I want to generate summaries from my notes, so that I can have a simple summary of patients’ symptoms.

- **Pre-Conditions**

- Users must have installed all dependencies and accessed the system via Localhost 3000.
- Must have created an account prior, containing a valid username and password.
- The user must be logged in.
- The user is at the summary generator page.

- **Steps Taken**

- a. The user pastes text into the input text box or has uploaded a file to the page.
- b. The user presses the “Redact & Summarize” button.
- c. The user waits for the summary to be generated by Artificial Intelligence.
- d. The summary is finished generating.

- **Post-Conditions**

- The user can read the summary generated by the AI.
- The user can download the summary as a PDF or DOC file using the buttons below the Output field.

- **Success Scenario**

- The user met all pre-conditions.
- The user successfully completed all the steps taken, listed above.
- The user has successfully generated a summary and can read it.
- The user can download the summary at this point.
- The user can edit the generated summary.

5. Editing a Generated Summary

- As a User, I want to edit the summary, so that the generated summary is free from errors.

- **Pre-Conditions**

- The user must have installed all dependencies and accessed the system via Localhost 3000.
- The user must have created an account prior, containing a valid username and password.
- The user must be logged in.
- Users must have generated a summary.

- **Steps Taken**

- a. The user clicks on the “Edit Summary” button.
- b. The system redirects the user to the summary editor page.
- c. The user clicks anywhere on the text box they would like to edit.
- d. The user types or deletes whatever they want on the text page.

- e. (if applicable) The user clicks on the “Undo Changes” button to undo their changes and start fresh. Repeat Step E until the user is satisfied with the edits made.
- f. The user downloads the edited summary to their computer as a PDF/DOC using the respective button.

- **Post-Conditions**

- The user has successfully edited the summary to their liking.
- The edited summary can be downloaded to the user’s computer.
- The user is satisfied with the edits made.

- **Success Scenario**

- The user met all pre-conditions.
- The user successfully completed all the steps taken, listed above.

6. Exporting Summaries to PDF or Word

- As a User, I want to save the summaries on my computer, so that I can see the summaries at a later time.

- **Pre-Conditions**

- Users must have installed all dependencies and accessed the system via Localhost 3000.
- Must have created an account prior, containing a valid username and password.
- Users must have generated a summary.
- Users must either be on the summary generator or summary editor pages.

- **Steps Taken**

- a. (if applicable) The user clicks on the download button (PDF) to save the summary as a PDF file.

- b. (if applicable) The user clicks on the download button (DOC) to save the summary as a DOC file.
- c. (if intending to edit and download) The user clicks on the edit summary button.
- d. (if intending to edit and download) The user edits the summary.
- e. (if intending to edit and download) The user presses either of the buttons listed in step A or B.

- **Post-Conditions**

- The summary is now saved on the user's computer.

- **Success Scenario**

- The user met all pre-conditions.
- The user successfully completed all the steps taken, listed above.
- The user can view the downloaded file locally on their computer.

7. Administrator Role

- As an Administrator, I want to view the Audit Log, so that I can see who logged into the system or generated summaries.

- **Pre-Conditions**

- Users must have installed all dependencies and accessed the system via Localhost 3000.
- Must have created an account prior, containing a valid username and password.
- The user's account must be an Administrator account

- **Steps Taken**

- a. The user successfully logs into the system.
- b. The user is at the homepage.
- c. The user clicks on the Admin Dashboard button.

d. The user views the Audit Log.

- **Post-Conditions**

- The user is able to view the contents of the Audit Log.
- The user can see who logged in and created summaries.
- The user can see previews of the summaries generated, and how long they took to generate.

- **Success Scenario**

- The user met all pre-conditions.
- The user successfully completed all the steps taken, listed above.
- The user saw the Audit Log and its contents, defined in the post-conditions section.

8. Account Settings

- As a user of the system, I would like to edit my account, to ensure that my user account information is up-to-date and correct.

- **Pre-Conditions**

- The user must have installed all dependencies and accessed the system via Localhost 3000.
- The user must have created an account prior, containing a valid username and password.
- The user must be logged in.
- The user must be at the homepage.

- **Steps Taken**

- a. The user clicks on the Account Settings icon (On the homepage or the navigation bar)
- b. The user edits the fields that they want to edit.
- c. (if applicable) The user clicks “Save and Exit” to save changes to the MongoDB server.

- d. (if applicable) If the user is not satisfied with their changes, they click “Quit Without Saving” to discard changes to their account.

- **Post-Conditions**

- The user is satisfied with the changes to their account.
- If the user changed their username or password, they will be able to use those credentials next time they log in.

- **Success Scenario**

- The user met all pre-conditions.
- The user successfully completed all the steps taken, listed above.
- The user is satisfied with their changes and is able to log in the next time they do so.
