

How to Evaluate Accuracy:

You can check whether your system's summary includes:

1. Demographics (gender, age).
2. Presenting complaint
3. Key negatives
4. Past medical history
5. Medications
6. Allergies
7. Exam findings
8. Assessment
9. Plan

1. Input:

Sample Doctor's Note (input)

Patient: Alisson Bucci, 23 y/o female

Visit Date: August 28, 2021

CC: Patient presents with trouble sleeping, irritable mood, tiredness, and lack of focus.

PMH: Anger Issues

Medications: None

Allergies: None

Exam: Vitals stable, BP 128/82, O2 sat 97% RA. Lungs: Breathing Normally, no rales. Heart: regular rhythm, no murmurs.

Assessment: Likely insomnia.

Plan: Consume melatonin.

Output:

Summary: "[REDACTED FULL NAME], a 23-year-old female, presents with trouble sleeping, irritability, tiredness, and lack of focus. Examination reveals stable vital signs and normal respiratory function. The assessment indicates likely insomnia, and the plan includes the use of melatonin."

Allergies: No Allergies

Time (Summarization): 8097.22 ms (8.097 seconds)

2. Input:

Sample Doctor's Note (input)

Patient: Linda-Jeane Chandler, 92 y/o female

Visit Date: December 17, 2025

CC: Patient presents with consistent flashbacks, nightmares, lack of focus, and hypervigilance.

PMH: Treated in the past for anxiety and depression

Medications: None

Allergies: None

Exam: Vitals stable, BP 128/82, O2 sat 100% RA. Lungs: Breathes normally, no rales. Heart: regular rhythm, no murmurs.

Assessment: Likely PTSD triggered by traumatic memories.

Plan: Continue going to the therapist. Seek additional help if needed.

Output:

Summary: "[REDACTED FULL NAME], a 92-year-old female, presents with consistent flashbacks, nightmares, lack of focus, and hypervigilance. She has a past medical history of anxiety and depression. Examination reveals stable vitals and normal respiratory function. The assessment indicates likely PTSD triggered by traumatic memories, with a plan to continue therapy and seek additional help if necessary."

Allergies: No Allergies

Time (Summarization): 11034.18 ms (11.034 seconds)

3. Input:

Patient: Anne Cuthbert, 13 y/o female

Visit Date: Sept 1, 2025

CC: Patient presents with sore throat and raspy voice.

PMH: Peanut Allergy

Medications: None

Allergies: Peanuts

Exam: Vitals stable, BP 128/82, O2 sat 100% RA. Lungs: Breathing Normally, no rales. Heart: regular rhythm, no murmurs.

Assessment: Sore Throat

Plan: take ibuprofen or paracetamol, drink lots of water, avoid hot drinks, consume lozenges, gargle salt water mix

Output:

Summary: "The patient is a 13-year-old female presenting with a sore throat and a raspy voice. Vital signs are stable with an oxygen saturation of 100% on room air. The heart rhythm is regular with no murmurs, and lung examination shows no rales. The treatment plan includes ibuprofen or paracetamol, hydration, avoidance of hot drinks, lozenges, and gargling salt water."

Allergies: No Allergies

Time (Summarization): 11888 ms (11.888 seconds)

4. Input:

Patient: Patricia Daletto, 6 y/o female

Visit Date: Sept 1, 2025

CC: Patient presents with persistent cough x3 weeks. Reports occasional shortness of breath, worse at night. Denies fever, chest pain, or hemoptysis.

PMH: mild asthma.

Medications: Lisinopril 10 mg daily, Albuterol inhaler PRN.

Allergies: Penicillin (rash).

Exam: Vitals stable, BP 128/82, O2 sat 97% RA. Lungs: scattered wheezes bilaterally, no rales.

Heart: regular rhythm, no murmurs.

Assessment: Likely asthma exacerbation triggered by seasonal allergies.

Plan: Continue Lisinopril. Use Albuterol inhaler q4–6h PRN for cough/wheeze. Start Montelukast 10 mg nightly. Order CXR to rule out infection. Follow up in 2 weeks.

Output:

Summary: "The patient is a 6-year-old female presenting with a persistent cough for three weeks and occasional shortness of breath, particularly at night. She has a history of mild asthma and is currently taking Lisinopril and Albuterol as needed. Examination reveals stable vitals and scattered wheezes in the lungs, with no signs of infection. The assessment indicates a likely asthma exacerbation triggered by seasonal allergies."

Allergies: Penicillin (rash)

Time (Summarization): 13696 ms (13.696 seconds)

5. Input:

Patient: Lydia Fitzgerald, 65 y/o female

Visit Date: August 13, 2027

CC: Patient presents with the feeling of faintness, constant thirst, heat rash, and a headache.

PMH: None

Medications: None

Allergies: None

Exam: Vitals stable, BP 130/89, O2 sat 97% RA. Lungs: Breathes normally, no rales. Heart: rapid heart beating. High body temperature.

Assessment: Likely Heatstroke caused by exposure to extreme heat.

Plan: Avoid High-Heat areas. If unable, continue monitoring vitals and try to cool off as much as possible. Drink plenty of fluids.

Output:

Summary: "The patient is a 65-year-old female presenting with faintness, constant thirst, heat rash, and headache. Vital signs are stable, but the patient exhibits rapid heart rate and high body temperature. The assessment indicates that symptoms are likely due to exposure to extreme heat. The plan includes cooling measures and hydration."

Allergies: No Allergies

Time (Summarization): 7728 ms (7.728 seconds)

6. Input:

Patient: Ferb Fletcher, 16 y/o male

Visit Date: June 1, 2025

CC: Patient presents with above normal growth spurt.

PMH: None

Medications: None

Allergies: None

Exam: Vitals stable, BP 128/82, O2 sat 100% RA. Lungs: Breathing Normally, no rales. Heart: regular rhythm, no murmurs.

Assessment: Healthy, Above Normal Height

Plan: No further follow-ups needed until the next examination.

Output:

Summary: "The patient is a 16-year-old male presenting with an above normal growth spurt. Vital signs are stable with blood pressure within normal limits and oxygen saturation at 100% on room air. Lung examination shows no signs, and the heart has a regular rhythm without murmurs. The overall assessment indicates the patient is healthy, with no further follow-ups required until the next examination."

Allergies: No Allergies

Time (Summarization): 9123 ms (9.123 seconds)

7. Input:

Patient: Steve Harrington, 19 y/o male

Visit Date: July 1, 2025

CC: Patient presents with no major health issues, or symptoms of any kind.

PMH: None

Medications: None

Allergies: None

Exam: Vitals stable, BP 119/80, Lungs: Breathing normally, no rales. Heart: regular rhythm, no murmurs.

Assessment: Healthy

Plan: No further follow-ups needed until the next examination.

Output:

Summary: "The patient is a 19-year-old male presenting with no major health issues or symptoms. Vital signs are stable, with normal lung and heart assessments. No follow-up appointments are necessary until the next examination."

Allergies: No Allergies

Time (Summarization): 6500 ms (6.500 seconds)

8. Input:

Patient: Honorio Hasbrouck, 63 y/o male

Visit Date: Sept 1, 2025

CC: Patient presents with Chest Pain and Shortness of Breath

PMH: Heart Disease

Medications: A statin

Allergies: None

Exam: Vitals stable, BP 140/90, O2 sat 99% RA. Lungs: Breathing Normally, no rales. Heart: regular rhythm, no murmurs.

Assessment: High Cholesterol

Plan: Regulate Diet.

Output:

Summary: "The patient is a 63-year-old male presenting with shortness of breath. Vital signs are stable with a blood pressure reading and oxygen saturation at 99% on room air. Lung examination shows no signs, and the heart has a regular rhythm without murmurs. The patient's medication includes a statin."

Allergies: [REDACTED FULL NAME]

Time (Summarization): 10160 ms (10.160 seconds)

9. Input:

Patient: John Nightingale, 21 y/o male

Visit Date: December 26, 2025

CC: Patient presents with difficulty concentrating, irritability, trouble sleeping, and constant fidgeting.

PMH: None

Medications: None

Allergies: None

Exam: Vitals stable, BP 128/82, O2 sat 100% RA. Lungs: Breathing normally, no rales. Heart: regular rhythm, no murmurs.

Assessment: Most likely experiencing anxiety.

Plan: Speak with guidance counselors, social workers, and/or therapists.

Output:

Summary: "The patient is a 21-year-old male presenting with symptoms of difficulty concentrating, irritability, trouble sleeping, and constant fidgeting. Vital signs are stable, with normal respiratory and cardiac assessments. The assessment suggests that the patient is most likely experiencing anxiety. A plan has been made to involve guidance counselors, social workers, and/or therapists."

Allergies: No Allergies

Time (Summarization): 16094 ms (16.094 seconds)

10. Input:

Patient: Baltazara Russell, 88 y/o female

Visit Date: December 4, 2024

CC: Patient presents with sore throat, muscle pain, unrefreshing sleep

PMH: None

Medications: None

Allergies: None

Exam: Vitals stable, BP 128/82, O2 sat 99% RA. Lungs: Breathing normally, no rales. Heart: regular rhythm, no murmurs.

Assessment: Likely Chronic Fatigue Syndrome

Plan: Consult a physician to develop an ideal program to reduce the severity of the fatigue.

Output:

Summary: "The patient is an 88-year-old female presenting with a sore throat, muscle pain, and unrefreshing sleep. Vital signs are stable with an oxygen saturation of 99% on room air. Lung examination shows normal breathing without rales, and the heart has a regular rhythm with no murmurs. A consultation with a physician is recommended to create a program aimed at reducing fatigue severity."

Allergies: No Allergies

Time (Summarization): 15650 ms (15.650 seconds)

Results

Mean: $109.97 \text{ seconds} / 10 = 10.997 \text{ seconds}$

Median: 10.160 seconds

Mode: ~11 seconds

Rounds:

1. 8.097
2. 11.034
3. 11.888
4. 13.696
5. 7.728
6. 9.123
7. 6.500
8. 10.160
9. 16.094
10. 15.650

In- Order: 6.500, 7.728, 8.097, 9.123, 10.160, 11.034, 11.888, 13.696, 15.650, 16.094

Have we met our goal of around 10 seconds or less?

Going by the results, we have met our goals somewhat. It takes about a hair over 10 seconds longer to generate a summary.

Accuracy:

1. Alisson Bucci (23F – insomnia)

Errors:

- No errors

Score: 9/9 → 100%

2. Linda-Jeane Chandler (92F – PTSD)

Errors:

- No missing information

Score: 9/9 → 100%

3. Anne Cuthbert (13F – sore throat; peanut allergy)

Errors:

- Allergies missing (should say peanut allergy, but summary incorrectly says “No Allergies”)

Everything else is spot-on.

Score: 8/9 → 88.9%

4. Patricia Daletto (6F – asthma exacerbation)

Errors:

- Medications missing (“Lisinopril” AND “Albuterol PRN” not mentioned)
- Plan missing Montelukast, CXR, follow-up.

The exam misses “no rales,” but includes wheezes. Partial credit? No—criteria is binary.

Correct items:

Demographics, CC, PMH, allergies, exam (partial but accepted), assessment.

Score: 5/9 → 55.6%

5. Lydia Fitzgerald (65F – heatstroke)

Errors:

- Does not explicitly mention “no allergies”
- Does not restate that PMH = none

Correct items:

Demographics, CC, exam, assessment, plan. Does not mention key negatives, but none were provided.

Score: 5/9 → 55.6%

6. Ferb Fletcher (16M – normal growth)

Errors:

- Does not explicitly say allergies = none
- PMH = none (not stated)

Everything else is correct.

Score: 7/9 → 77.8%

7. Steve Harrington (19M – healthy)

Errors:

- Allergies not included
- PMH = none not stated
- Does not include medications (none)
- Missing exam BP (119/80) → partial but counts as missing detail

Correct items:

Demographics, CC, assessment, plan, exam (partially correct but missing BP)

Score: 5/9 → 55.6%

8. Honorio Hasbrouck (63M – chest pain/SOB, heart disease)

Major problems:

- CC incorrectly summarized (mentions only SOB, omitting chest pain)
- Assessment missing (“High cholesterol” not included)
- Plan missing
- PMH missing (Heart disease)
- Allergies incorrect (“[REDACTED FULL NAME]” instead of “None”)
- Meds incorrectly minimized (“statin” only, missing that it’s a med for heart disease)

Correct items:

Demographics, exam

Score: 2/9 → 22.2%

9. John Nightingale (21M – anxiety)

Errors:

- Does not include "No allergies".
- Does not include PMH = none.
- Does not state medications = none.

Everything else is present and correct.

Score: 6/9 → 66.7%

10. Baltazara Russell (88F – chronic fatigue syndrome)

Errors:

- Does not include allergies = none
- Does not include PMH = none
- Does not include medications = none

Everything else is correct.

Score: 6/9 → 66.7%

Final Summary Table

Case	Score	Accuracy
1. Alisson	9/9	100%
2. Linda-Jeane	9/9	100%
3. Anne	8/9	88.9%
4. Patricia	5/9	55.6%
5. Lydia	5/9	55.6%
6. Ferb	7/9	77.8%
7. Steve	5/9	55.6%
8. Honorio	2/9	22.2%
9. John	6/9	66.7%
10. Baltazara	6/9	66.7%

Overall Accuracy (D+)

Mean: $(100 + 100 + 88.9 + 55.6 + 55.6 + 77.8 + 55.6 + 22.2 + 66.7 + 66.7) \div 10$
 $= 688.9 \div 10 = 68.9\%$

Final Overall Accuracy: ~69%

Did we meet our goal of 80% Accuracy?

No, we are about 10% short. What could cause inaccuracies? This includes, but are not limited to:

- Overloading the AI (10 consecutive summaries)
- Confusing or conflicting information, which can trick the AI

Takeaway: Like all humans, AI is not perfect either.
