

Name: Samuel Wu

Topic: Research for Capping

Over the course of this course, I was tasked with initially doing research regarding searching for a suitable redaction library or AIs to do redaction. This mainly led to places such as Hugging Face(https://huggingface.co/docs/transformers/en/model_doc/t5?usage=transformers+CLI), Chat-GPT/OpenAI (<https://platform.openai.com/docs/guides/text>), and Philter(<https://www.philterd.ai/>). We ended up using Philter(which we got it to work with limited success). Scrubadub was considered later on, after Philter was adopted. Scrubadub, however, showed that it was unable to redact any of the text that we sent, so our current option for redaction is either through a designed fallback, which would manually redact the text, or through Philter.
