

Name: Alisson Bucci

Age: 23

Location: Montreal, Quebec, Canada

Role: Scribe

Technical Expertise Level: Low (Aspiring English Teacher in a hospital internship)

Primary Goals: To be able to edit summaries, so that each summary is as accurate as possible.

Frustrations/Pain Points: Prior to using the system, Ally had to manually type the notes into a word editor and conduct edits via the word editor. (major inconvenience in regards to her time)

What does the user need from the PNF system?: A simple editor within the system that allows to edit summaries prior to downloading them to her computer.

Scenario 3

A. Workflow

1. Ally logs into the system with her username and password.
2. Ally views the homepage and dismisses the HIPAA warning.
3. Ally clicks the “Create New Summary” button.
4. Ally uploads the notes/types them into the input field.
5. Ally clicks the “Redact PHI” button.
6. The AI generates the summary.
7. Ally proofreads the summary, and notes that the AI has redacted certain things, but not others.
8. Ally clicks the “Edit Summary” button.
9. Ally edits the summary, and proofreads the summary again.
10. Ally downloads the summary.

B. What is Ally Doing?

- Ally logs into the system in order to generate simplified summaries and edit them for accuracy and completeness.

C. How does the system help Ally?

- The system helps Ally by giving her the ability to edit the summaries in the browser. This saves her time by allowing her to upload notes, summarize them, and editing them all in one place.

D. Real-World Use Case

- Users like Ally may need a summary editor in the browser for the sake of convenience.
- A built-in editor reduces the need for users to export summaries and edit them in another program.
