

Name: John Nightingale

Age: 21

Location: Hudson Valley, New York

Role: Administrator

Technical Expertise Level: High (Technologically inclined/literate)

Primary Goals: To monitor who accesses the system and when they access it.

Frustrations/Pain Points:

What does the user need from the PNF system?: A dedicated page where he can view the usernames of the people who log into and use the system, as well as the timestamps of when they accessed the system.

Scenario 1

A. Workflow

1. John logs into the system using his username and password.
2. John views the homepage and dismisses the HIPAA dialogue.
3. John clicks on the Admin Dashboard button.
4. John views the Audit Log, which contains a record of all of the users who logged into and used the system.

B. What is John Doing?

- John logs into the system and clicks the Admin Dashboard.
- John views the Audit Log to see who logs in and when they log into the system.

C. How does the system help John?

- The system helps John easily track usage of the system, and ensures that only those who have the Administrator role have access to Admin privileges.

D. Real-World Use Case

- Users like John may need to view the Audit Log to view who logs in and uses the system, in the off chance a bad actor has caused a system outage.
- The audit log shows who has last accessed the system.
