

Name: Lydia Fitzgerald

Age: 52

Location: Boulder, Colorado

Role: Physician (Doctor)

Technical Expertise Level: Medium

Primary Goals: To have a more efficient way to summarize the notes taken during her patient's visits.

Frustrations/Pain Points: Lots of time wasted on manually summarizing notes. The former method of note summarization is time consuming and inefficient.

What does the user need from the PNF system?: A way to easily summarize patient symptoms in minutes.

Scenario 2

A. Workflow

1. Lydia logs into the system with her username and password.
2. Lydia views the homepage and dismisses the HIPAA warning.
3. Lydia clicks the "Create New Summary" button.
4. Lydia uploads a PDF/ DOC file from her computer or types in the notes by hand.
5. Lydia clicks the "Redact PHI" button.
6. The AI generates the summary.
7. Lydia proofreads the summary, and downloads it to her computer.

B. What is Lydia Doing?

- Lydia logged into the system to create a simplified summary by inputting her patient notes.

C. How does the system help Lydia?

- The system helps Lydia create simplified summaries from notes and saves her time by not needing her to manually summarize the notes.

D. Real-World Use Case

- Users like Lydia may need a summarizing agent in the off-chance they have a lot of patient visits, and need to summarize countless patient notes within a certain amount of time.
